

FIND MORE INFO in the current WREB candidate guides available via the Exam Preparation page at [WREB.org](http://WREB.org).

# GET READY FOR YOUR DENTAL EXAMINATION!

## 1 Comprehensive Treatment Planning (CTP)

- A performance-based, examiner-graded section that requires candidates to review three patient cases and create treatment plans, construct responses to questions, and perform tasks (e.g., write prescriptions).
- Requires a broad understanding of diagnosis, prevention, restoration, endodontics, periodontics, prosthodontics, oral surgery, radiology, pediatric dentistry, and patient-management procedures.

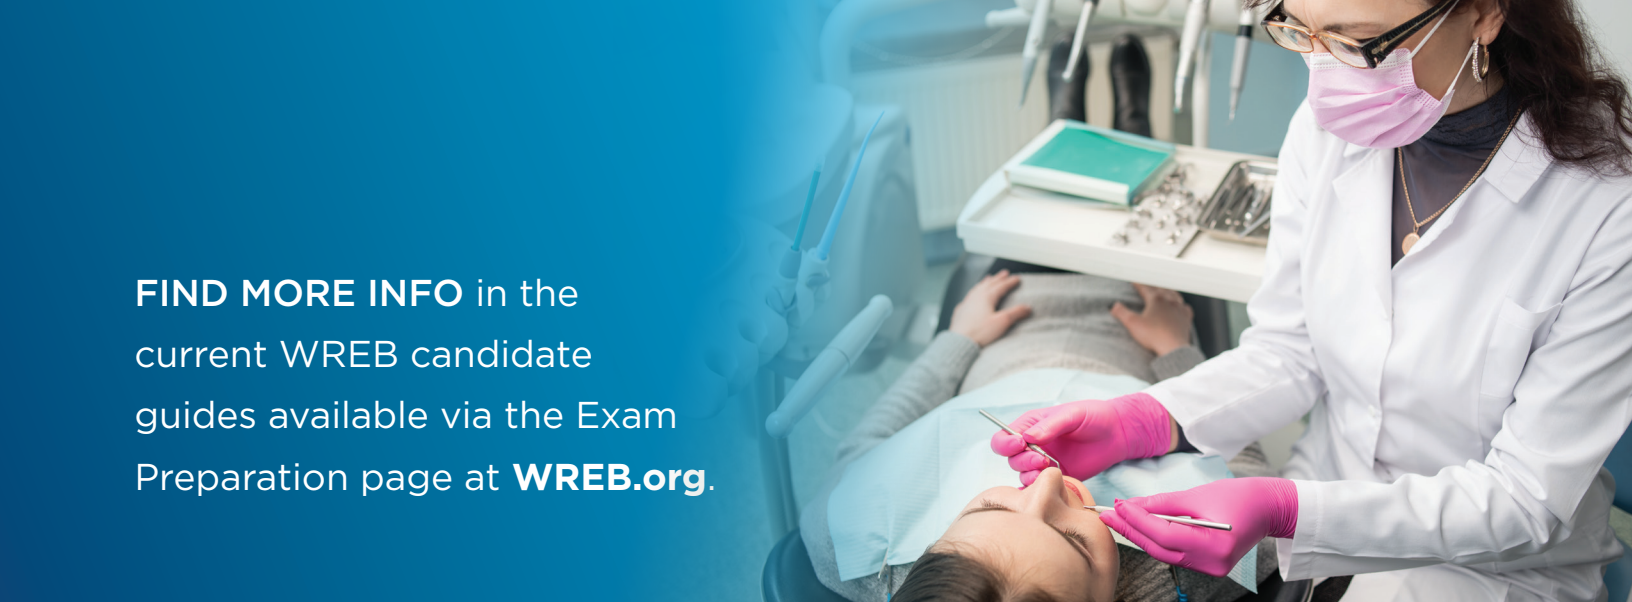

## 2 Endodontics Simulation

- A performance-based, examiner-graded clinical manikin-based examination. Candidates must perform two endodontic procedures on simulated teeth mounted in a segmented arch within a manikin that is positioned to simulate working on a patient.
- Anterior tooth procedure requires treatment of a maxillary central incisor, including access, instrumentation, and obturation.

- Posterior tooth procedure requires access of a mandibular first molar tooth. Access of the posterior tooth must enable grading examiners to identify all canal orifices.
- Candidates also required to provide post-operative radiographic images for examiner grading.

## 3 Operative Dentistry

- Available in either a patient-based or manikin-based form.
- Manikin-based form involves performing a Class II (composite or amalgam) and a Class III composite restoration on a posterior tooth and anterior tooth.
- Limited radiographic interpretation involved for both patient-based and manikin-based exams; the depth of the simulated caries will require candidates to modify their preparations.
- Modifications initially reviewed by a Floor Examiner.
- Both preparation and restoration will be accomplished with full clinical simulation and with rubber-dam isolation.

**FIND MORE INFO** in the current WREB candidate guides available via the Exam Preparation page at **WREB.org**.

#### 4 Prosthodontics Simulation

- A performance-based, examiner-graded clinical manikin-based examination.
- Candidates complete two prosthodontic procedures (three preparations) on simulated teeth in a mounted articulator and manikin that is positioned to simulate working on a patient.
- Candidates are required to prepare an anterior tooth for a full-coverage crown and prepare two abutments to support a posterior three-unit fixed partial denture prosthesis (i.e., bridge). The three-unit bridge must have a path of insertion that allows full seating of the restoration.

#### 5 Periodontics

- Available in either a patient-based form or manikin-based form.
- Patient-based form involves scaling and root planning on a patient with a minimum of eight (8) surfaces of readily demonstrable subgingival calculus.
- Manikin-based form will not involve qualifying a patient but will involve the removal of subgingival calculus on teeth in an assigned quadrant mounted in a manikin to simulate performing the procedure on a patient.

Please call us with any questions at (623) 209-5400.

Or, reach us by email at [dentalinfo@wreb.org](mailto:dentalinfo@wreb.org).

The CTP, Endodontic, and Operative sections are required to successfully complete the WREB Exam, and you may also elect to complete the Prosthodontics and Periodontics sections if the state(s) to which you are applying for licensure requires them. All attempted sections, required or elective, will be reported to state boards.
